# Welcome to the CoGrammar Sequences

The session will start shortly...

Questions? Drop them in the chat. We'll have dedicated moderators answering questions.

#### **Cyber Security Session Housekeeping**

- The use of disrespectful language is prohibited in the questions, this is a supportive, learning environment for all - please engage accordingly.
   (Fundamental British Values: Mutual Respect and Tolerance)
- No question is daft or silly ask them!
- There are Q&A sessions midway and at the end of the session, should you
  wish to ask any follow-up questions. Moderators are going to be
  answering questions as the session progresses as well.
- If you have any questions outside of this lecture, or that are not answered during this lecture, please do submit these for upcoming Academic Sessions. You can submit these questions here: <u>Questions</u>

#### Cyber Security Session Housekeeping cont.

- For all non-academic questions, please submit a query:
   www.hyperiondev.com/support
- We would love your feedback on lectures: <u>Feedback on Lectures</u>
- Find all the lecture content in you <u>Lecture Backpack</u> on GitHub.

#### Safeguarding & Welfare

We are committed to all our students and staff feeling safe and happy; we want to make sure there is always someone you can turn to if you are worried about anything.

If you are feeling upset or unsafe, are worried about a friend, student or family member, or you feel like something isn't right, speak to our safeguarding team:

Ian Wyles Designated Safeguarding Lead

Simone Botes

Nurhaan Snyman

Ronald Munodawafa

Rafig Manan

Scan to report a safeguarding concern

or email the Designated Safeguarding Lead: Ian Wyles safeguarding@hyperiondev.com

#### Stay Safe Series:

Mastering Online Safety One Week/step at a Time

While the digital world can be a wonderful place to make education and learning accessible to all, it is unfortunately also a space where harmful threats like online radicalisation, extremist propaganda, phishing scams, online blackmail and hackers can flourish.

As a component of this BootCamp the *Stay Safe Series* will/s designed guide you through essential measures in order to protect yourself & your community from online dangers, whether they target your privacy, personal information or even attempt to manipulate your beliefs.

#### Download with Caution: Avoiding Dangerous Files

- Use Trusted Sources Only
- Look for HTTPS
- Avoid Clicking on Pop-ups
- Scan Downloads with Antivirus
- Keep Software Updated
- Beware of Free Downloads
- Check File Extensions

#### Learning Objectives & Outcomes

- Define lists, tuples, sets, and dictionaries in Python
- Differentiate between lists, tuples, sets, and dictionaries in Python
- Use lists, tuples, sets, and dictionaries within your code.

# Sequences

Why do we want to store sets of data rather than storing each piece of data in a new variable?

# Sequences

Why is it important to be able to manipulate data in code?

Please have a look at the poll notification and select an option.

How can you append an item to a list in Python?

- A. my\_list.add(4)
- my\_list.append(4)
- C. my\_list.insert(4)D. my\_list[4] = 4

Please have a look at the poll notification and select an option.

How do you define a dictionary in Python?

- A. my\_dict = [1: "apple", 2: "banana"]
- B.  $my_dict = \{1, 2, 3\}$
- C. my\_dict = {1: "apple", 2: "banana"}
- D. my\_dict = (1: "apple", 2: "banana")

# Sequences

- 4 Main Sequence Types
  - o Lists: for ordered collections.
  - o Tuples: For fixed data
  - Sets: for unique items
  - o Dictionaries: for key-value pairs, mappings

### Lists

- Syntax: [] or list()
- Mutable
- Ordered
- Holds any data type
- Use Cases
  - Storing items in order.
  - Tracking data that will change

[1,2,3,4,5]

# **Tuples**

- Syntax: ( ) tuple()
- Immutable
- Ordered
- Holds any data type
- Use Cases
  - Grouping fixed data together such as coordinates or user details that should not change.

#### Sets

- Syntax: { } or set()
- Mutable
- Ordered
- Only allows unique elements.
- Use Cases
  - Removing duplicates
  - Membership testing
  - o Mathematical operations like union and intersection.

#### **Dictionaries**

- Syntax: { } or dict()
- Mutable
- Stores data in key-value pairs
- Use Cases

{key:value}

Please have a look at the poll notification and select an option.

What happens if you try to access a key that doesn't exist in a dictionary using square brackets ([])?

- A. It returns None
- B. It raises a KeyError
- C. It adds the key with the value None
- D. It raises a ValueError

Please have a look at the poll notification and select an option.

What does my\_list.pop() do in Python?

- A. Removes the first element
- B. Removes the element at index 0
- C. Removes the last element
- D. Adds a new element at the end

# Questions and Answers

Thank you for attending
